

SC.software

Telecom Software Vendor

About Us

As specialists in software development for the telecom sector, we offer a comprehensive development cycle that meets all your needs

Consulting services → Project management →
Design → Software development → Testing →
Integration → 24/7 support → R&D

80+

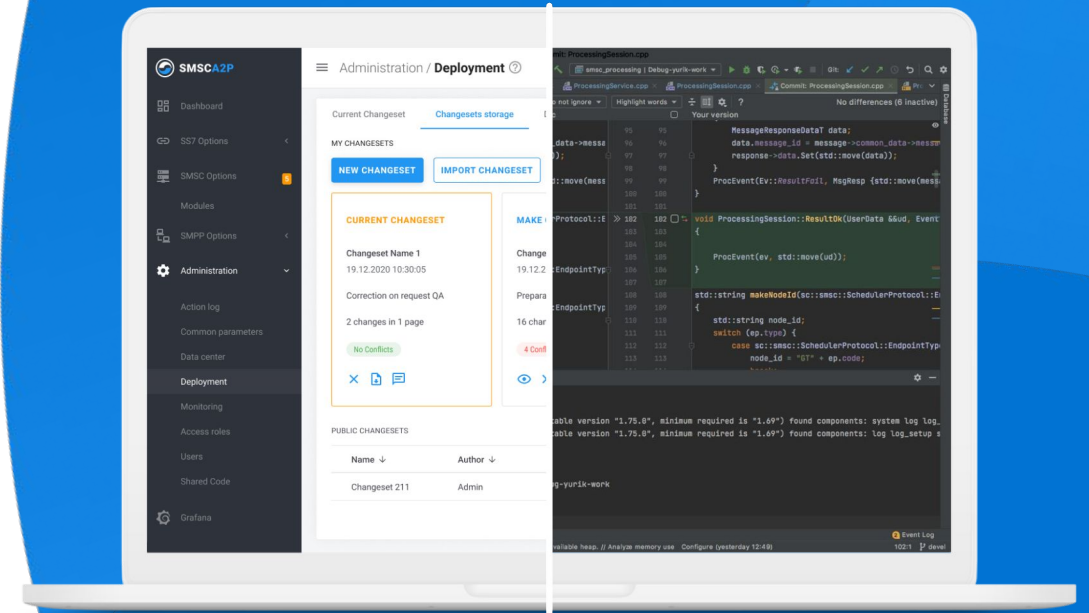

effective telecom products

250+

successful installations in CIS countries and Europe

350+

mIn subscribers use services provided by our solutions

Our clients

More than 50 companies 17 countries

Areas of work

Extensive experience in creating customized solutions based on client specifications

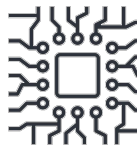

Regulatory solutions

Products for government-level clients to combat counterfeit and stolen devices, as well as to support number portability (MNP)

VAS & Core products

Value added services and platforms for basic services in mobile networks

SIM & eSIM

Supply of SIM and eSIM, as well as the provision of specialized software for working with SIM cards

Featured Products:

Value Added Services

VAS Consolidation
Multiplatform

SMSC: A2P, P2P, Transit, Bulk, Free, IoT

Messaging Hub + AI

Call Completion Suite: Voice Mail, MCA, Beep Call, Pay4Me, Flash Calls

Steering of Roaming

STP

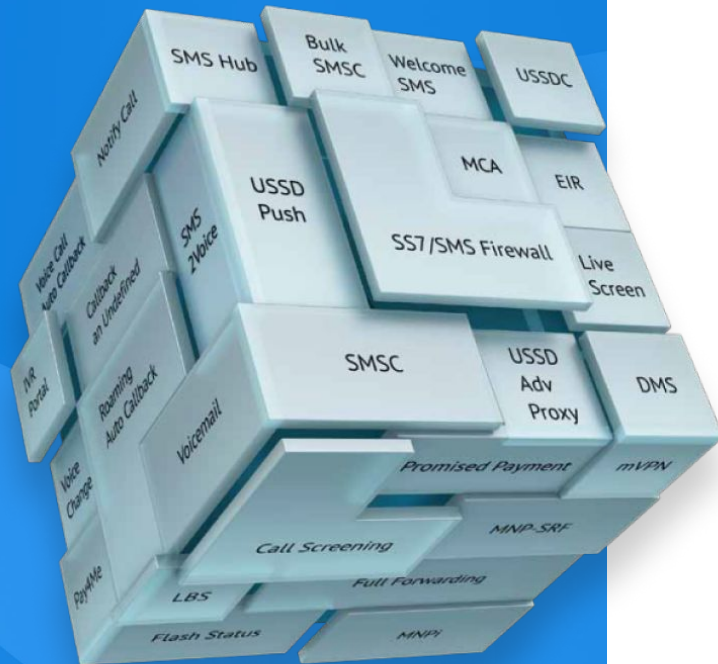

IMEI Based Control + Charging

SS7 / SMS Firewall + AI

SoftSwitch

Multiplatform

30+ Services
in one product

Multiplatform is a universal solution for organizing telecom services

- Accelerating the growth of your business
- High fault-tolerance
- Consolidation Approach
- Free trial period for services based on Multiplatform

Featured Products:

Regulator / national level

CEIR / IMEI Registration

The system coordinates the work of the EIR. Centralized EIR management in all mobile networks of the country gives the following advantages:

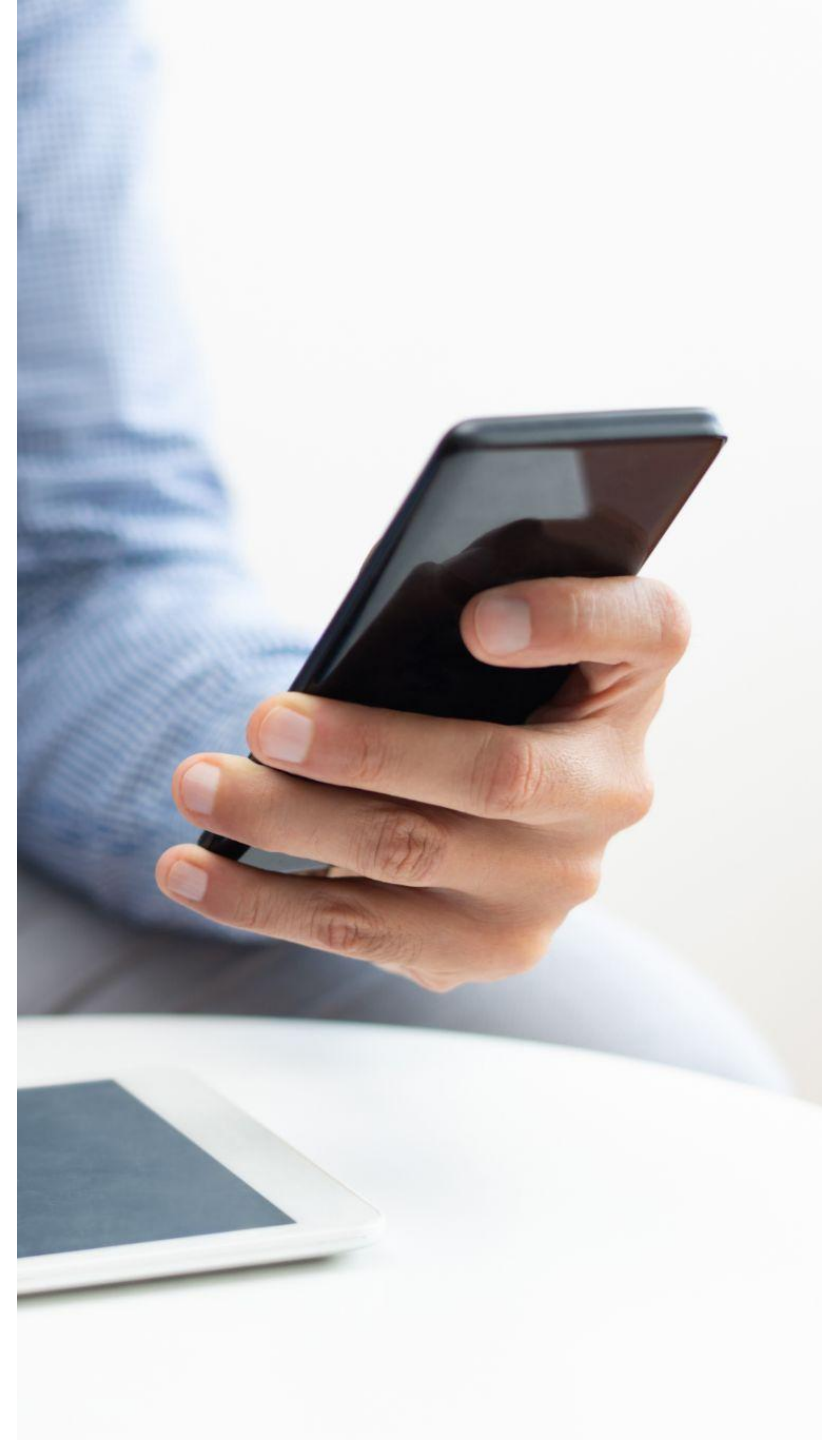

- Effective fight and prevention of theft of mobile devices.
- Limiting the use of counterfeit equipment.
- Monetization.
- The ability to create fundamentally new services.

EIR

Provides accounting of subscriber terminals as soon as they appear on the network. For this, the platform integrates with the operator's switching equipment and processes CheckIMEI requests.

MNP System

The introduction of number portability is an important step in liberalization of the country's communications market. The service allows the subscriber to change the service provider without changing the number. Using the MNP System, you can quickly and securely connect all participants in the migration process.

Featured Products:

SIM & eSIM

DMS / SMS Setting

SC.SMS-Settings is a platform that configures mobile devices automatically and sends settings to subscribers via SMS, USSD, or IVR. The platform can also be used for marketing research. It can be installed in a minimum configuration and supports virtualization:

- Easy configuration of data transfer services and a sequential increase in the number of users of such servicesMonetization.
- Reliability and scalability
- As a marketing tool, the SC.SMS-Settings system increases analytic capabilities and allows to solve the many tasks and etc.

eSIM RSP

A cloud-based platform for preparing, delivering, storing, and managing eSIM profiles for mobile operators. Developed in the SaaS format, it allows operators to introduce a speedy, cost-effective, and streamlined eSIM service.

OTA

SIM cards are essential for MNO communication with subscribers as they contain necessary data for secure exchange. OTA platforms use SMS to update these data and also facilitate interactions with subscribers via SIM cards.

Our quality

- Associate member of GSMA and permanent exhibitor at Mobile World Congress in Barcelona
- Member and contributor of the International Telecommunication Union (ITU-T)
- Compliance with the quality management system (ISO 9001)
- Ecovadis Certification
- Member of the MEF community

We're committed to innovation and staying ahead by leveraging the latest technologies and always updating our tech stack with advanced solutions.

Why SC.Soft

Broad experience

Successful cases, dozens of installations in different countries, implementation of pilot projects and continuous participation in tenders.

Customer oriented approach

Thanks to our experience, we can take into account the interests of all participants in the implementation project and help maximize the benefits and advantages.

Teamwork

Implementation of all technical work in the shortest possible time without loss of quality.

Competence

Consulting customers and project participants on the implementation of products, participation in the working group to develop requirements for the implementation, interaction with the GSM, membership in the ITU-T.
